

PARTS OF A FLOWER

3b. CROSSWORD

Use the diagram and the clues to remember your new knowledge about flower parts! Write the names of all the parts in the grid.

Across

- The sticky bit on top of the style that receives pollen.
- The different stick in the centre of the flower, with the stigma on the end.
- A small grain on the end of a filament that holds pollen.
- A colourful part that attracts insects.
- This word is for the structure that the stigma and style make up together.
- The anther and the filament together make a s_____.

Down

- This is where new seeds are made.
- A long thin stalk that has an anther on the end.
- The tough, green shields that surround the petals.
- The long, strong part that attaches the flower to the plant.
- The yellow dust that fertilises new seeds.
